

PRIVACY SHADE

ABSTRACT OF THE DISCLOSURE

[0036] A privacy shade provides the quick concealment of information displayed on a display screen, such as a display screen of a computer monitor, a television set or a DVD system. The privacy shade is a piece of flexible material attached to a top portion of the screen. The shade covers up and conceals any information on the screen when the shade is pulled over the screen. The shade may be folded over the computer monitor, television set, or DVD system in an “up” position to make the screen visible to the user. The shade may be of any shape and size to cover the viewing area of the screen, and may be constructed from any appropriate flexible material.
